

LIST

View online: <https://www.construct.net/en/make-games/manuals/construct-3/plugin-reference/list>

The **List** object creates either a **dropdown list** or **list box** form control. A dropdown list only shows one item but can be expanded to show the full list; a list box shows multiple items at once. The image below shows a dropdown list on the left (which has been expanded), and a list box on the right.

Scripting

When using JavaScript or TypeScript coding, the features of this object can be accessed via the [IListInstance script interface](#).

Layering HTML objects

This object displays using a HTML element rather than drawing in to the canvas. This means its layering works differently to other objects. To learn more about how to layer HTML objects, see [HTML layers](#).

Styling lists

As List objects are HTML elements, their appearance can be customised using CSS (Cascading Style Sheets). The *ID* and *Class* properties can be used to identify the HTML element, and a CSS [project file](#) added to apply some styles to it.

List properties

Items

A list of the initial items to display in the list, with one item per line. Click the button to the right of the property to open a multi-line text box in a dialog to edit this more conveniently. The property field cannot show line breaks, so instead represents lines with the special `\n` escape sequence.

Tooltip

A tooltip that appears in most browsers if the user hovers the mouse over the button and waits. Leave blank for no tooltip.

Initially visible

Whether or not the control is initially visible in the layout.

Enabled

Whether the control is initially enabled. If disabled, the control will appear greyed out and the selection cannot be modified.

Type

Choose between the *List box* and *Dropdown list* control styles. An image displaying the two types is shown above.

Multi-select

Allow more than one item to be selected when *Type* is *List box*. This has no effect for dropdown lists.

Auto font size

Automatically set the font-size property of the element according to the layout and layer scale. This will prevent the *font-size* CSS property being manually set with the *Set CSS style* action. Disable if you intend to use *Set CSS style* to adjust the *font-size* property.

ID Optional

An optional *id* attribute for the element in the DOM (Document Object Model). This can be useful for CSS styling.

Class Optional

An optional *class* attribute for the element in the DOM (Document Object Model). This can be useful for CSS styling.

List conditions

See [common conditions](#) for features shared between form control objects.

Compare item text at

Compare the text of a given item in the list.

Compare selected item text

Compare the text of the currently selected item in the list.

Compare selection

Compare the zero-based index of the currently selected item.

On clicked

Triggered when the control is clicked.

On double-clicked

Triggered when the control is double-clicked.

On selection changed

Triggered whenever the chosen selection in the control is changed. This can be by any means of input (such as a mouse click, keyboard press, or touch input on mobile).

List actions

See [common actions](#) for features shared between form control objects.

Add item

Append a new item to the end of the list of available choices.

Add item at

Insert a new item to the list of available choices at a certain zero-based index.

Clear

Remove all the available choices from the list.

Remove

Delete an item at a specific index.

Set item text

Change the text of an item at a specific index.

Set selection

Set the item at a specific index as selected.

Set tooltip

Set the *Tooltip* property of the object, displayed by most browsers when hovering the mouse over the control.

List expressions

ItemCount

The current number of items in the list.

ItemTextAt

Return the text of an item at a zero-based index in the list.

SelectedCount

The number of currently selected items. This will always be either 0 or 1 unless a list box with *Multi-select* enabled is used.

SelectedIndex

The zero-based index of the currently selected item. For multi-select lists, use *SelectedIndexAt* instead.

SelectedIndexAt

The index of a selected item out of all the selected items. In other words, *SelectedIndexAt* with numbers 0 to `SelectedCount - 1` gives the indices of all the selected items.

SelectedText

The text of the currently selected item. For multi-select lists, use *SelectedTextAt* instead.

SelectedTextAt

The text of a selected item out of all the selected items. In other words, *SelectedTextAt* with numbers 0 to `SelectedCount - 1` gives the text of each selected item.
