ENABLING DEVELOPER MODE

Construct 3's Developer Mode enables extra testing features for developers, such as a special [addon testing mode](#).

To enable Developer Mode, open Construct 3's settings dialog and click or tap the dialog caption 10 times. A prompt will appear asking if you want to show developer mode settings. Click OK.

Now in the settings dialog there should be a checkbox named *Enable developer mode*. Tick the checkbox, close the settings dialog and restart Construct 3. You are now using Developer Mode.

The developer mode menu

When Developer Mode is active, a new menu named *Developer mode* appears in the main menu. This provides some shortcuts and tools useful in developer mode, such as a shortcut to install a developer mode addon, or [set up TypeScript](#) for an addon.
