

IEVENTSHEET INTERFACE

The `IEventSheet` interface represents an event sheet in the project model.

Since events can be nested underneath each other, they are represented as a tree. `GetRoot()` returns the root node of the tree.

Methods

`GetProject()`

Return the associated [IProject](#).

`GetName()`

Return the name of the event sheet.

`GetRoot()`

Return the root node of the event sheet. This is an [IEventParentRow](#) representing the top level of the event sheet.
