

ILAYOUT INTERFACE

The `ILayout` interface represents a layout in the project model. Note that `ILayoutView` represents the editor view, but `ILayout` represents the layout in the project.

Methods

`GetProject()`

Return the associated `IProject`.

`GetName()`

Return the name of the layout.

`GetAllLayers()`

Return an array of `ILayer` representing all the layers on this layout.

`GetEventSheet()`

Return the `IEventSheet` assigned for this layout. Note that layouts do not have to have an event sheet assigned, so this can return `null`.
