

IBEHAVIORTYPE INTERFACE

The `IBehaviorType` interface represents a behavior type in Construct. A behavior type is the behavior equivalent of an object type: when a behavior is added to an object type, there is one behavior type created on the object type, and one behavior instance created per object instance.

Methods

`GetProject()`

Return the `IProject` representing the behavior type's associated project.

`GetName()`

Returns a string of the behavior type name.
