

LANGUAGES IN API REQUESTS

Overview

You can optionally pass a language ISO code with all requests with the parameter `requestedLanguage`. If you do not specify a language ISO code, the games default language will be used which can be configured in your [CGS account](#).

If your plan supports it the property `responseLanguage` will be the same as the requested language and all translatable text elements in the response will be returned in this language, except for error messages in the top level `errorMessage` property which will always return in English.

If your plan doesn't support it translations (for example you've run out of translation credits), the property `responseLanguage` will default to the language the source translatable text was written in. An error will not be thrown to ensure the client still receives an expected response.

Supported Requested Language ISO Codes

Below is a list of permitted ISO codes for passing with the `requestedLanguage` parameter.

```
AR = Arabic
BG = Bulgarian
CS = Czech
DA = Danish
