

TIER OBJECT

The Tier Object

You can setup Tiers for your leaderboard in your Construct Game Services account. Tiers are a way of grouping players into categories based on their performance in the leaderboard. For example you might have a "Gold" tier for your top players, a "Silver" tier for your mid level players and a "Bronze" tier for your lower level players.

When you retrieve scores from a leaderboard, each score will contain a tier object if the leaderboard has tiers setup and the player has been placed into a tier based on their score.

Example Tier

```
1  {
2    "id": "gold-players",
3    "name": "Gold Tier Players",
4    "originalLanguage": {
5      "iso": "EN",
6      "englishName": "English"
7    },
8    "responseLanguage": {
9      "iso": "EN",
10     "englishName": "English"
11   }
12 }
```

Object Properties

id string

A unique ID for this tier.

name string

The name of the tier that can be shown to players.

originalLanguage [Language](#)

The language the tier name was written in.

responseLanguage [Language](#)

The language the tier name is returned in - this will differ from original language if the request asks for content to be returned in a different language and the plan supports translations.
