

RATING STATUS OBJECT

The Rating Status Object

When rateable objects are returned in a response, this status object is also returned. It shows the current rating values for this object, along with the authenticated players cast ratings if a session key is passed with the request.

Example Rating Status

```

1  {
2    "isRateable": true,
3    "ratings": {
4      "key1": { ... },
5      "key2": { ... }
6    },
7    "myRatings": {
8      "key1": { ... },
9      "key2": { ... }
10   }
11 }
```

Object Properties

isRateable bool

Are players allowed to cast votes on this object or not.

ratings Dictionary<string, RatingAggregate>

A list of all rating dimensions ID's and their corresponding rating aggregate. An empty dimension ID represents the dimensionless rating aggregate.

myRatings Dictionary<string, Rating>

If the request originated from a player providing a session key, this property is returned containing a list of all **rating dimensions** ID's and this players corresponding rating record. An empty dimension ID represents the dimensionless rating. The rating record will be **null** if the player hasn't cast a vote on this dimension yet.
