

# SLIDER BAR

The **Slider bar** object provides a simple form control allowing the user to pick a value between a minimum and maximum by moving a slider along a bar.

## Scripting

When using JavaScript or TypeScript coding, the features of this object can be accessed via the [ISliderBarInstance script interface](#).

## Layering HTML objects

This object displays using a HTML element rather than drawing in to the canvas. This means its layering works differently to other objects. To learn more about how to layer HTML objects, see [HTML layers](#).

## Slider bar properties

---

### Minimum

The lowest value that can be picked, when the slider is all the way to the left.

---

### Maximum

The highest value that can be picked, when the slider is all the way to the right.

---

### Step

The increment of possible values. For example if the step is 10, then the slider will jump in units of 10 as it is moved, and only a multiple

of 10 can be chosen as a value.

---

### Tooltip

An optional tooltip to show while hovering the mouse over the control.

---

### Initially visible

Whether the control is initially visible or invisible in the page.

---

### Enabled

Whether the control is initially enabled and usable, or disabled so that it cannot be interacted with.

---

### ID Optional

An optional *id* attribute for the element in the DOM (Document Object Model). This can be useful for CSS styling.

---

### Class Optional

An optional *class* attribute for the element in the DOM (Document Object Model). This can be useful for CSS styling.

---

## Slider bar conditions

See [common conditions](#) for features shared between form control objects.

---

### Compare value

Compare the currently chosen value from the slider bar.

---

### On changed

Triggered when the user finishes changing the chosen value on the slider bar. Typically this only triggers when the user releases a mouse button or touch after moving the slider.

---

### On changing

Triggered repeatedly as the user changes the chosen value on the slider bar. Unlike *On changed* this will reflect the current value of the

slider as the user is still dragging it.

---

### **On clicked**

Triggered when the user clicks the slider bar.

---

## **Slider bar actions**

See [common actions](#) for features shared between form control objects.

---

### **Set maximum**

Set the maximum value that can be chosen from the slider bar.

---

### **Set minimum**

Set the minimum value that can be chosen from the slider bar.

---

### **Set step**

Set the increment step of the slider bar.

---

### **Set tooltip**

Set the tooltip that appears when the mouse hovers over the slider bar.

---

### **Set value**

Set the currently selected value of the slider bar. This must be between the currently set minimum and maximum values.

---

## **Slider bar expressions**

### **Maximum**

Return the currently set maximum slider value.

---

### **Minimum**

Return the currently set minimum slider value.

---

### **Step**

Return the currently set slider step value (increment).

## Value

Return the current value chosen by the user, between the minimum and maximum values.
