

CONDITIONS

In events, **conditions** filter instances that meet some criteria. They appear to the left of the event. All conditions in an event must be met by at least one instance for the **actions** to run. The actions then only apply to the instances that met the conditions.

System conditions do not pick any instances: they are simply either true or false, unless they specifically reference an object, such as with *Pick random instance*.

There are three kinds of conditions: normal conditions, **triggered** conditions, and **looping** conditions. You can also create OR blocks which run if *any* condition is true, rather than all the conditions. See [How events work](#) for more information.

Adding and editing conditions

When you add a new event, you are taken through the process of adding the first condition for the event. This is described in more detail in the [Event Sheet View](#) manual entry.

You can add multiple conditions to an event block. To add another condition, right-click either an existing condition or the event margin and select **Add another condition**. All conditions must be met for the event to run, unless you set the event to be an OR block, in which case *any*

condition can be true for the event to run. To set an OR block, right-click the event margin and select **Make OR block**.

To edit a condition, **double-click** it. You can also **right-click** it and choose **Replace** or **Delete**.

Inverting conditions

Conditions can be **inverted**, which flips the thing they test. For example, the condition *Monster is overlapping Player* is true whenever a monster is touching the player. However, if inverted, it appears with a red invert icon and means *Monster is **not** overlapping Player*.

Not all conditions can be inverted (e.g. triggers can't be, because the event doesn't make sense inverted in that case).

Breakpoints

Paid plans only It is possible to place a breakpoint on a condition, to pause execution when it is reached in the **debugger**. For more information, see [breakpoints](#).
