

FLOWCHART

The flowchart itself does not have a lot of information - in fact it only has a name which is used at runtime by the [Flowchart Controller](#) to create instances of flowcharts defined in the editor. Usually it is the nodes inside a flowchart that are of the main interest.

Adding flowcharts

Right-click the flowcharts folder in the [Project Bar](#) and select the **Add flowchart** option.

To edit a flowchart, double click on it in the Project Bar or right-click on it and select the **Open** option from the context menu. Doing any of those things will bring up the [Flowchart View](#).

Flowchart properties

Name

The name of the flowchart. Used at runtime to create an instance of a flowchart that the Flowchart Controller can manipulate.
