

IINSTANCEBASE INTERFACE

View online: <https://www.construct.net/en/make-games/manuals/addon-sdk/reference/base-classes/iinstancebase>

The `IInstanceBase` interface is used as the base class for instances in the SDK. For "world" type plugins, instances instead derive from `IWorldInstanceBase`, which itself derives from `IInstanceBase`.

`IInstanceBase` cannot be directly constructed; it should only be used as a base class.

Properties

`this._sdkType`

Reference to the associated SDK type class.

`this._inst`

Reference to the `IObjectInstance` interface, or `IWorldInstance` interface for "world" type plugins, representing this instance in the editor. This allows access to Construct's built-in features for instances.

Methods

`Release()`

Optional override for when an instance is released.

`OnCreate()`

Optional override for when an instance is created in the editor.

`OnPropertyChanged(id, value)`

Optional override for when a property with the given ID is changed. The value the property was changed to is also passed.

`LoadC2Property(name, valueString)`

Optional override to use custom logic for importing properties from a Construct 2 project referencing a Construct 2 version of this plugin.

`GetProject()`

Return the **IProject** representing the instance's associated project.

GetObjectType()

Convenience method to return the **IObjectType** interface representing Construct's object type class.

GetInstance()

Return the **IObjectInstance** corresponding to this instance.
