

DOMINANCE SCRIPT INTERFACE

View online: <https://www.construct.net/en/make-games/manuals/construct-3/scripting/scripting-reference/object-interfaces/idominstance>

The `IDOMInstance` script interface represents a single instance of an object type (represented by `ObjectClass`) that appears in a layout and represents a DOM element such as a button or other form control at runtime. It derives from the `IWorldInstance` script interface.

Note these methods can still be used in worker mode, since it does not directly access a DOM element.

DOMInstance APIs

focus()

blur()

Focus or blur the DOM element represented by this instance.

setCssStyle(prop, val)

Apply a CSS style to the DOM element, using a string of the property name (in CSS format, e.g. `"background-color"`) and a string of the property value (e.g. `"red"`).

getElement()

Return the HTML element used to represent the object.

Since the DOM APIs are not available in worker mode, this will throw an exception when running in a Web Worker.
