TIER OBJECT

View online: https://www.construct.net/en/game-services/manuals/game-services/leaderboards/api-objects/tier

The Tier Object

You can setup Tiers for your leaderboard in your Construct Game Services account. Tiers are a way of grouping players into categories based on their performance in the leaderboard. For example you might have a "Gold" tier for your top players, a "Silver" tier for your mid level players and a "Bronze" tier for your lower level players.

When you retrieve scores from a leaderboard, each score will contain a tier object if the leaderboard has tiers setup and the player has been placed into a tier based on their score.

Example Tier

```
{
  "id": "gold-players",
  "name": "Gold Tier Players",
  "originalLanguage": {
    "iso": "EN",
    "englishName": "English"
  },
  "responseLanguage": {
    "iso": "EN",
    "englishName": "English"
  }
}
```

Object Properties

id string

A unique ID for this tier.

name string

The name of the tier that can be shown to players.

originalLanguage Language

The language the tier name was written in.

responseLanguage Language

The language the tier name is returned in - this will differ from original language if the request asks for content to be returned in a different language and the plan supports translations.
