'BOUND TO' BEHAVIOR

View online: https://www.construct.net/en/make-games/manuals/construct-3/behavior-reference/bound-to

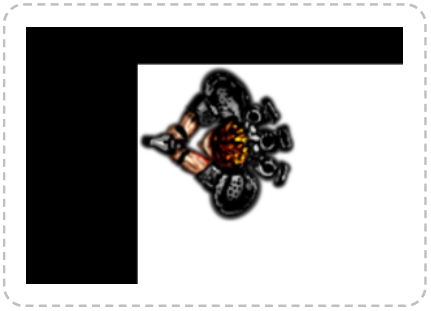

The **'Bound to' behavior** prevents an object leaving the edge of the layout or viewport.

This behavior has no conditions, actions or expressions - just the following properties.

'Bound to' properties

Bound by

Set to *Edge* to prevent any part of the object leaving the specified region. The object will stop at the position shown below:

Set to *Origin* to only prevent the object's origin leaving the region. The result depends on where the origin is placed on the object, but with a centred origin the object will stop in a position similar to the image shown below:

Region

Choose whether the area the object is bound to is the layout area, or the viewport.
